                                     This invention describes a novel bacterial preparation (I) which comprises one or more isolated and purified strain(s) of a microorganism, cultured in tryptone yeast extract (TYE) broth, which produces one or more RTX toxins (belonging to the family of toxins referred to as Repeats in Toxins), where the strain(s) have at least one RTX toxin which is cell-associated. The products of the invention have immunostimulatory, antimicrobial, antiinflammatory, antiarthritic and antiabortive activity. The bacterial preparation may be used as vaccines for the prophylaxis and treatment of infectious diseases caused by strains of microorganisms which produce one or more RTX toxins. The infectious diseases are swine which produce one or more RTX toxins. The infectious diseases are swine to the prophylaxis and which produce one or more RTX toxins. The infectious diseases are swine to the produce one or more RTX toxins.

The modification comprise modified leukotoxin-50 (1kt50) protein. The modification comprise the removal of amino acids within the hydrophobic transmembrane domain of a full length leukotoxin protein. Modified leukotoxin sequences are used in vaccines to treat or prevent diseases assowith leukotoxin, e.g., respiratory disease, and Mannheimla infect (particularly M. haemolytica infection). In addition, the vaccin

                          Plasmid pAA352 is derived from pAA114, a clone isolated from a genomic library of P. haemolytica. The protein, designated "new leukotoxin" or "LKT 352" is 98% homologous to authentic leukotoxin. LKT 352 and pref. antigenic fragments of it, can be used in vaccines to protect cattle from respiratory diseases. They can also be used to produce antibodies for immunoaffinity purificn. of further proteins. [Fig. contg. sequence v. poor]. see also AAR10890, AAR10909, AAR10910 and AAQ10783.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is Pasteurella (Mannheimia) haemolytica modified leukotoxin-66 (lkt66) protein. The modification comprises the removal of amino acids within the hydrophobic transmembrane domain of a full length leukotoxin protein. Modified leukotoxin sequences are used in vaccines to treat or prevent diseases associated with leukotoxin, e.g., respiratory disease, and Mannheimia infection (particularly M. haemolytica infection). In addition, the vaccine is used to prepare a medicament. Furthermore, the plant transformed with modified leukotoxin sequences is fed to an animal such as a ruminant, to prevent or treat respiratory diseases.
                                                                                                                                                                                                   Pasteurella haemolytica proteins and genes - vaccines to protect animals esp. cattle from e.g. pneumonia.

                                                                                                                                                                                                                                               The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lktA coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic

                                                                                                                                                                                                                                                                                                                         The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkth coded for by plasmid pAAS52. The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningor-encephalitis, septicaemia, arthritis and pneumonia in

From this, two constructs were made in the ptac-based vector, pGH432:lacI digested with SmaI. One, pAA342, contsined the entire MaeI fragment from lktA while the other, pAA345, contained the entire MaeI fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA345 expressed full length leukotoxin at very low levels. The 3' end of the lktA gene of pAA345 was therefore ligated to StyI/BamHI digested pAA342 to yield pAA35 contg. the LKT352 sequence. The protein expressed from the vector can be used to prepare a subunit vaccine with other P. haemolytica antigens, e.g. fimbrial protein, plasmin receptor or 50K outer membrane protein. The vaccines can be used to paase a subunit vaccine with

                                                                                     colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were flactate dehydrogenase from the neutrophils. A 4kb crelease of lactate dehydrogenase from the neutrophils. A 4kb creament was obtd. Progressively larger clones were isolated by colonies was unjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing truncated leukotoxin peptide at clow levels. The 3' end of the lkt gene from the full length clone was ligated to the truncated gene clone to yield plasmid pha352. The clone was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, companion continuous sequence of companion with the colonies as a carrier protein to bring about a larger leukotoxin works as a carrier protein to bring about a larger antigens can regulate growth rate, lactation and reproductive efficiency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in lambda gtl1 and pUCl3. Resulting clones were used to transform E coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P.

                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                              A vaccine comprising an outer membrane protein (OMP) extract of Haemophilus somnus enriched with iron regulated proteins is new. The vaccine pref. further comprises an immunogenic leukotoxin polypeptide, esp. an immunogenic pasteurella haemolytica leukotoxin hamologous to LKT352. Example 1.2 describes the prodn. of p. haemolytica recombinant leukotoxin from pAA352.

Two expression constructs were made. One, pAA342, contained the contained the entire lktA gene, while the other, pAA345, contained the entire lktA gene, pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full 1. Leukotoxin peptide at high levels. Therefore, the 3' end 1. Conference was ligated into pAA342, yielding plasmid pAA352.

LEM352 or new leukotoxin is 98% homologous to authentic

The antigenic tides and polypucleotides are useful for raising an immune in an animal directed against Moraxella, preferably against sor M. catarrhalis, and for treating Moraxella infections. The sequence represents the nucleotide sequence of the A subunit toxin from M. bovis Dalton 2d.

The protein encoded by the plasmid, "new leukotoxin" or "LET 352" is 98% homologous to authentic leukotoxin. LET 352 and pref. antigenic fragments of it, can be used in vaccines to protect cattle from respiratory diseases. They can also be used to produce antibodies for immunoaffinity purifice. of further proteins. [Fig. contg. sequence v. poor] see also AAR10890, AAR20909, AAR10910 and AAQ10783.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                                                                                                                                                                       IFN), linked to at least one RTX toxin epitope (preferably the sequence shown in AAW13865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the leukotoxin is a truncated leukotoxin lacking leukotoxic activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P.haemolytica, including shipping fever in cattle.
                                                                                                                                                                                                                                                                                                                                                                        AAT60032 and AAT60033 represent the coding sequences for immunogenic chimeric proteins of the invention. This sequence represents a chimeric protein containing the bovine interleukin-2 (II-2) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from interleukin-2 (II-2) and gamma interferon (gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            interleukin-2; IL-2; gamma interferon; gamma Pasteurella haemolytica; LKT352; respiratory fibrinous pneumonia; cattle; therapy; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel vaccine composition comprising an climation commercial protein that comprises gamma-interferon (gamma-IFN) or an active fragment thereof, linked to an epitope of a Pasteurella haemolytica leukotoxin (LKT). Pasteurella species, especially Pasteurella C haemolytica, are responsible for respiratory diseases in a range of a gricultural animals, most particularly cattle, but also sheep, pigs, consisted the most economically important respiratory disease associated with Pasteurella species, affecting respiratory disease associated with Pasteurella species, affecting to 15-30% of exposed cattle and resulting in a 2-5% mortality rate in the exposed population. The vaccine composition of the invention is is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock. The present sequence represents DNA encoding a fusion protein comprising bovine interleukin-2 (IL-2) and Pasteurella haemolytica leukotoxin, which may also be used as an anti-Pasteurella vaccine.

The oligonucleotides were annealed and ligated into vector pAA352 (contg. the Pateurella heamolytica leuko-toxin gene) which had been digested with BamHI. The ligated DNA was used to transform E. coli strain MH3000. Transformants contg. the oligonucleotide inserts were identified by restriction endonuclease mapping and the recombinant plasmid designated pAA502. The chimeric protein produced from the plasmid works to bring about a larger immune response than the antige

                                                                                                                                                                              Oligonucleotides contg. sequences from bovine Rotavirus viral protein 4 (VP4) gene were constructed on a Pharmacia Gene Assembler using standard phosporamidite chemistry. The oligonucleotides were annealed and ligated into vector pAA352 (contg. the Pateurella heamolytica leuko-toxin gene) which had been digested with BamHI. The ligated DNA was used to transform E. coli strain MH3000. Transformants contg. the oligonucleotide inserts were identified by restiction endonuclease mapping and the recombinant plasmid designated pAA501. The chimeric protein produced from the plasmid works to bring about a larger immune response than the antigonalone, i.e. the leukotoxin works as a carrier protein.
                                                                                                                                                                                                                                                                                                                                     Immunological carrier system with enhanced immunogenicity comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or gonadotropin releasing hormone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맒
                                                                                                    The LKT352 gene was prepd. as follows: lktA, an MaeI fragment contg. the gene was ligated into the SmaI site of pUCl3 to form pAA179. From this, two constructs were made in the ptac-based vector, pGH32:lacI digested with SmaI. One, pAA342, consisted of the 5' AhaIII fragment from lktA while the other, pAA345, contained the entire MaeI fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA345 expressed the lktA gene of pAA345 was therefore ligated to Styl/BamHI digested pAA342 to yield pAA352 contg: the LKT352 sequence. The protein expressed full from the vector can be used to prepare a subunit vaccine with other P. haemolytica antigens, e.g. fimbrial protein, plasmin receptor or 50K outer membrane protein. The vaccines can be used to proteir cattle from respiratory diseases used a neumonia esa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccines for Pasteurella haemolytica infection in cattle - comprise sub-unit antigens from P haemolytica fimbrial protein, plasmin receptor, 50 K outer membrane protein and leukotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2528
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2468

hemolytica to increase anti-leukotoxin antibody levels. Positive colonies were screened for their ability to produce leukotoxin by incubating cell lysates with bovine neutrophils and measuring the release of lactate dehydrogenase from the neutrophils. A 4kb fragment was obtd. Progressively larger clones were isolated by chromosome walking to isolate full length recombinants of ca. 8kb, in pAA114. The clone was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing truncated leukotoxin at low levels. The 3' end of the 1ktA gene from the full length clone was ligated to the truncated gene clone to yield plasmid pAA352. The clone was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotatics viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger immune response than the antigen alone. Immunisation with these
                                              immune response than the antigen alone. antigens can regulate growth rate, lacta efficiency. See also AAQ41318-23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in lambda gtll and pUCl3. Resulting clones were used to transform E coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture permatant of P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or

                                                                                                                                                                                                                                                                        Two expression constructs were made. One, pAA342, contained the 5'-AhaII fragment of the 1tkA gene, while the other, pAA345, contained the entire 1ktA gene. pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the 1ktA gene was ligated into pAA342, yielding plasmid pAA352. LKT352 or new leukotoxin is 98% homologous to authentic
                                                                                                                                                                                                                                                                                                                                                                       polypeptide, esp. an immunogenic Pasteurella haemolytica leukotoxin homologous to LKT352. Example 1.2 describes the prodn. of P. haemolytica recombinant leukotoxin from pAA352.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ωy
                   The present sequence represents a recombinantly produced or chemically synthesised nucleic acid encoding leukotoxin 352 (LKT 352), derived from the lktA gene that is present in the plasmid pAA352. This gene produces a truncated protein that has an estimated molecular weight of about 99 kDa and lacks the cytotoxic portion of the molecule. Thus this gene has a higher expression level than that of the full-length molecule. This can be used in the construction of a chimeric protein that comprises a leukotoxin polypeptide, several multimers, and a GRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.
                                                                                                                                                                              Chimeric protein of leukotoxin and gonadotropin releasing useful for, e.g. preparation of vaccines for reduction of of mammary tumours in mammals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAT37178). It was produced by ligating a synthetic sequence of the following synthetic sequence of the synthetic sequence of the synthetic sequence of the synthetic s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A chimeric gene fusion (AAT37176) in plasmid pCB113 codes for a fusion protein between a truncated leukotoxin (LKT-352) from Pasteurella haemolytica (see also AAT37179) and a 4-copy gonadoliberin-releasing hormone (GRRH) repeat sequence (see also AAT37178). It was produced by ligating a synthetic sequence for 4-copy GRRH into vector pAA352 (ATC 68283), which carries the LKT-352 gene. Recombinant plasmid pCB113 (LKT 3524 copy GRRH, ATCC 69749) was obtd. Escherichia coli transformants produced the chimeric protein, which is useful as a vaccine for feature that the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gonadotropin-releasing hormone multimer fusion proteins - walk leukotoxin polypeptide for increased immunogenicity, useful antifertility vaccine prodn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     P-PSDB; AAW03942
